PROFESSIONAL SUMMARY

Senior Testing Engineer with 7 years of experience across web, mobile, government, and agriculture-sector platforms. Skilled in designing and executing end-to-end, API, performance, and mobile automation strategies, and in owning UAT sign-off and go/no-go release decisions for enterprise and government clients. Experienced testing native iOS and Android applications on real devices, with mobile automation built in Robot Framework, alongside strong web and API testing. Uses AI tools such as Atlassian Rovo, Claude Code, and Copilot to accelerate test design, automation scripting, and Jira workflows. Known for identifying business/requirement gaps early, driving defect closure, and building automation frameworks that reduce manual regression effort.

CORE SKILLS

Testing Types: End-to-End (E2E), Integration, API, UAT, Usability, and Exploratory Testing

Automation & Performance: Selenium (C#, Java), Robot Framework (mobile automation), SHAFT_ENGINE, JMeter, Real-Device iOS & Android Testing (LambdaTest)

AI-Assisted Testing: Atlassian Rovo (Jira), Claude Code (TestRail-to-automation scripts, Jira stories & issues), Claude, Copilot

Process & Leadership: Requirements & Business Gap Analysis, Go/No-Go Release Decisions, Defect Lifecycle Management, UAT Ownership

Domain Experience: Government / Regulatory, Utilities, Agriculture, Enterprise Web & Mobile Applications

PROFESSIONAL EXPERIENCE

Senior Testing Engineer | ITWorx – Egypt

March 2022 – Present

- Reviewed customer and business requirements for an agriculture-sector platform (crop protection, product analysis, and farmer services modules), identifying contradictions and business gaps prior to development.
- Owned UAT documentation and execution directly with customers; recommended go/no-go decisions for UAT and production deployments, with documented justification.
- Identified test cases eligible for performance testing and executed load/performance tests using JMeter to validate system stability under load.
- Identified test cases eligible for automation and authored automation scripts using Selenium C#, covering both web and mobile (real iOS/Android devices via LambdaTest) test flows.
- Built and maintained mobile automation suites using Robot Framework, executed on real iOS and Android devices via LambdaTest for cross-device coverage.
- Used Atlassian Rovo in Jira to generate test cases from user stories, and Claude and Copilot for other day-to-day tasks.
- Used Claude Code in manual and automation testing to read TestRail test cases and turn them into automation scripts, read Jira stories, and create and update Jira issues.
- Executed test cases, reported and tracked defects to closure, and communicated progress and release status directly to customers.
- Led tool investigations and developed internal training materials to raise team-wide testing standards.

Software Quality Control & Automation Tester | Bayan-Tech – Egypt

June 2021 – February 2022

- Authored release notes and version documentation for each production release.
- Built and maintained automation test suites using Selenium (Java) with the SHAFT_ENGINE framework, including an automation test roadmap.
- Tested “Raspberry,” an in-house translation and location-based application, including regression testing after each code change to confirm defect fixes.

- Supported end users of the FreshDesk application and produced demo videos for stakeholder walkthroughs.

Software Quality Control | ZAHA Technology Solutions – Egypt
May 2020 – June 2021

- Performed E2E and UAT testing on a regulatory/citizen portal for the Financial Regulatory Authority (FRA), and on a web and handheld-device system delivered for the Cairo Electricity Company.
- Owned defect tracking and regression testing whenever code changes were released, reporting progress and changes directly to stakeholders.
- Trained end users on new system releases and served as the main testing point of contact for customer communication.
- Recognized as a top performer (July 2020) for consistent delivery quality.

Software Tester (Part-time) | Joint Scope Technologies – Egypt
September 2020 – December 2020 — concurrent, part-time alongside NTG Clarity role below

- Carried out defect tracking, regression, and E2E testing on a part-time basis alongside full-time employment at NTG Clarity.

Software Quality Control | NTG Clarity – Egypt
July 2019 – December 2020

- Prepared test scenarios for module- and system-level testing on government and utility-sector projects, including work related to the Financial Regulatory Authority (FRA) and Cairo Electricity Company systems.
- Provided UX feedback to developers and product managers based on test outcomes, and carried out regression testing after each code change.
- Trained users, interfaced directly with customers, and reported work progress and changes to stakeholders.

EDUCATION

- **B.Sc. in Computer Science** — Faculty of Computer Sciences and Information Systems, Fayoum University (2017)

TOOLS & TECHNOLOGIES

- **Test/Project Management:** TFS, Azure DevOps, TestRail, Trello, JIRA, FreshDesk
- **Automation & Performance:** Selenium (C#, Java), SHAFT_ENGINE, Robot Framework (mobile automation), JMeter, LambdaTest (real device iOS/Android)
- **AI Tools:** Atlassian Rovo (Jira), Claude Code, Claude, Copilot
- **Database & API:** Postman, MySQL Workbench, DBeaver, PgAdmin
- **Monitoring & Cloud:** AWS, CloudWatch, Datadog

AWARDS & ACTIVITIES

- Best QA Runner-Up & Best Team — Facebook Team, Testathon (Facebook Testing Hackathon), Cairo, Egypt
- Top Performer, July 2020 — ZAHA Technology Solutions
- Certified Tester Foundation Level (ISTQB / ASTQB, U.S.)
- Test Automation: Leveling Up — Automatest
- Career Advising Training — Amr Eid (May 2019)
- Practical Software Testing Training — SWQ Academy (Nov 2018)
- Intel Ideation Workshop — Intel Corporation
- TIEC Capacity Building Program for Universities — Innov Egypt (Jul 2016)

ADDITIONAL INFORMATION

- **Languages:** English, Arabic
- **Soft Skills:** Quick learner, attention to detail, flexible, strong problem-solving and analytical skills
